

# M16 Stud Bolt, Double-End Dimensions

Engineering Hardware & Fasteners · [engineeringhardware.com/guide/size/m16-cad-svg-091-stud](https://engineeringhardware.com/guide/size/m16-cad-svg-091-stud)

Fasteners Bolts Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091) M16 Stud Bolt, Double-End Dimensions

Bolts · GB/T 901 / DIN 939

Controlling dimensions to GB/T 901 / DIN 939, with clearance hole and tapping drill and tightening torque.

M16 Stud Bolt, Double-End dimensions to GB/T 901 / DIN 939: coarse thread pitch 2 mm, clearance hole (ISO 273 medium) 17.5 mm, tapping drill 14 mm. Tighten to approximately 210 Nm at property class 8.8 in a dry, as-supplied condition.

Coarse thread pitch

2 mm

Clearance hole (ISO 273 medium)

17.5 mm

Tapping drill

14 mm

Tightening torque (class 8.8)

210 Nm

Figures are nominal values from the governing standard. Confirm against the tolerance class for your application before machining or ordering.

Dimensional and assembly data for M16 Stud Bolt, Double-End to GB/T 901 / DIN 939. Includes head size and width across flats, clearance-hole and tapping-drill diameters, tightening torque per property class, and the sizes to step up or down to when the joint requires it.

## M16 Dimensional Row (GB/T 901 / DIN 939)

| Thread size | Pitch (mm) | Length L (mm) | Engagement depth $b_m$ (mm) | Material            | Reference standard |
|-------------|------------|---------------|-----------------------------|---------------------|--------------------|
| M16         | 2.0        | 150           | 24                          | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |

## Hole Sizes for M16

|                                           |         |
|-------------------------------------------|---------|
| Coarse-thread pitch (ISO 724)             | 2 mm    |
| Through-hole / clearance (ISO 273 medium) | 17.5 mm |
| Tapping drill, coarse thread              | 14 mm   |

## Tightening Torque for M16

|                                                     |                  |
|-----------------------------------------------------|------------------|
| <b>Class 8.8 (dry, <math>\sim\mu</math> 0.125)</b>  | $\approx$ 210 Nm |
| <b>Class 10.9 (dry, <math>\sim\mu</math> 0.125)</b> | $\approx$ 295 Nm |
| <b>Class 12.9 (dry, <math>\sim\mu</math> 0.125)</b> | $\approx$ 355 Nm |

Indicative dry-joint values. Lubrication can lower the required torque by 15–25%. Always confirm against the joint design, especially when going up a strength class.

## Proof Load & Strength for M16

|                                                         |                     |
|---------------------------------------------------------|---------------------|
| <b>Tensile stress area <math>A_s</math> (ISO 898-1)</b> | 157 mm <sup>2</sup> |
| <b>Proof load, class 8.8</b>                            | 91 kN               |
| <b>Proof load, class 10.9</b>                           | 130 kN              |
| <b>Proof load, class 12.9</b>                           | 152 kN              |
| <b>Min. ultimate tensile, class 8.8</b>                 | 126 kN              |

Proof load = stress area  $\times$  proof stress per ISO 898-1. Design joints so the working preload stays below the proof load of the selected class.

## Common Applications for M16 Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091)

M16 Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091) are commonly specified for medium-duty structural connections, automotive sub-frames and equipment chassis.

## Mating Parts for M16

For M16, pair with a M16 hex nut (ISO 4032 / DIN 934) and, where used, a M16 flat washer (ISO 7089 / DIN 125A) under the head and under the nut.

## When to Step Up or Down from M16

When the joint preload approaches the proof load of M16 class 8.8, step up to M20 class 8.8 (or move to M16 class 10.9). When the joint is over-specified, M12 often saves weight and cost without losing the safety margin.

## Technical Drawing

Customize the parameters below — every spec field is editable, and the drawing redraws to match the values you choose.

Changing the size will snap the other fields to that size's standard values; you can then override any individual value.

Sends the selected values to the quote form below.

## Request a Quote

The form below follows the current technical drawing configuration. Change the drawing values above and the request details update automatically.

## Dimensions & Specifications (GB/T 901 / DIN 939)

| Thread size | Pitch (mm) | Length L (mm) | Engagement depth bm (mm) | Material            | Reference standard |
|-------------|------------|---------------|--------------------------|---------------------|--------------------|
| M6          | 1.0        | 50            | 8                        | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M8          | 1.25       | 60            | 10                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M10         | 1.5        | 80            | 15                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M12         | 1.75       | 100           | 18                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M14         | 2.0        | 120           | 21                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M16         | 2.0        | 150           | 24                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M20         | 2.5        | 180           | 30                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M24         | 3.0        | 200           | 36                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M30         | 3.5        | 240           | 45                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M36         | 4.0        | 280           | 54                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |

Inside the plant

## Manufactured in our own plant

This part is cold-formed, threaded, heat-treated and finished in-house. The stages below are where its class and finish are actually decided.

1.

01

### **Cold heading**

Wire rod is drawn to size and cold-formed into blanks. Forming rather than cutting keeps the grain flow continuous around the head, which is where a bolt is most likely to fail.

Head dimensions and under-head radius checked at set-up and per shift.

2.

02

## Thread rolling

Threads are rolled between hardened dies rather than cut. Rolled threads are stronger in fatigue than cut threads and hold pitch and flank angle far more consistently across a batch.

Go / no-go ring gauges to ISO 965 tolerance class 6g.

3.

03

### Heat treatment

Quench-and-temper brings carbon and alloy steel to the property class ordered — 8.8, 10.9 or 12.9 — with the furnace charge tracked so a finished lot can be traced back to it.

Core hardness and tensile tested per lot to ISO 898-1.

4.

04

## Surface treatment

Zinc, zinc-nickel, hot-dip galvanizing, black oxide, phosphate and Dacromet, selected against the service environment rather than against the price list.

Coating thickness and neutral salt spray hours to ISO 9227.

## Frequently Asked Questions

What torque do M16 class 8.8 Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091) take?

A dry M16 class 8.8 joint takes about 210 Nm ( $\approx$  295 Nm for 10.9,  $\approx$  355 Nm for 12.9). Confirm against your joint design; lubrication reduces these values.

What clearance and tapping drill suit M16?

Use a 17.5 mm clearance hole (ISO 273 medium) for through-fixing, or a 14 mm tapping drill for a coarse M16 thread.

What is the coarse-thread pitch of M16 for Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091)?

For M16 the standard coarse pitch is 2 mm — this is the value used for Stud Bolt, Double-End — GB/T 901 / DIN 939 (Series 091).

How do I request a quotation?

Use the technical drawing on this page to pick the exact configuration, then submit it with the quote form. We respond within one business day.
