

# M6 Stud Dimensions

Engineering Hardware & Fasteners · [engineeringhardware.com/guide/size/m6-cad-svg-096-stud](https://engineeringhardware.com/guide/size/m6-cad-svg-096-stud)

Fasteners/Bolts/Stud — GB/T 15389 / DIN 939 (Series 096)/M6 Stud Dimensions

Bolts · GB/T 15389 / DIN 939

Controlling dimensions to GB/T 15389 / DIN 939, with clearance hole and tapping drill and tightening torque.

M6 Stud dimensions to GB/T 15389 / DIN 939: coarse thread pitch 1 mm, clearance hole (ISO 273 medium) 6.6 mm, tapping drill 5 mm. Tighten to approximately 10 Nm at property class 8.8 in a dry, as-supplied condition.

Coarse thread pitch

1 mm

Clearance hole (ISO 273 medium)

6.6 mm

Tapping drill

5 mm

Tightening torque (class 8.8)

10 Nm

Figures are nominal values from the governing standard. Confirm against the tolerance class for your application before machining or ordering.

This page covers M6 Stud to GB/T 15389 / DIN 939: the full dimensional row, hole and tool sizes, proof-load data and typical applications. All values are taken from the governing standards (GB/T 15389 / DIN 939 together with ISO 273, ISO 724 and ISO 898-1 where applicable).

## M6 Dimensional Row (GB/T 15389 / DIN 939)

| Thread size | Pitch (mm) | Length L (mm) | Engagement depth $b_m$ (mm) | Material            | Reference standard |
|-------------|------------|---------------|-----------------------------|---------------------|--------------------|
| M6          | 1.0        | 50            | 8                           | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |

## Hole Sizes for M6

|                                           |        |
|-------------------------------------------|--------|
| Coarse-thread pitch (ISO 724)             | 1 mm   |
| Through-hole / clearance (ISO 273 medium) | 6.6 mm |
| Tapping drill, coarse thread              | 5 mm   |

## Tightening Torque for M6

|                                                     |                 |
|-----------------------------------------------------|-----------------|
| <b>Class 8.8 (dry, <math>\sim\mu</math> 0.125)</b>  | $\approx$ 10 Nm |
| <b>Class 10.9 (dry, <math>\sim\mu</math> 0.125)</b> | $\approx$ 14 Nm |
| <b>Class 12.9 (dry, <math>\sim\mu</math> 0.125)</b> | $\approx$ 17 Nm |

Indicative dry-joint values. Lubrication can lower the required torque by 15–25%. Always confirm against the joint design, especially when going up a strength class.

## Proof Load & Strength for M6

|                                                         |                      |
|---------------------------------------------------------|----------------------|
| <b>Tensile stress area <math>A_s</math> (ISO 898-1)</b> | 20.1 mm <sup>2</sup> |
| <b>Proof load, class 8.8</b>                            | 12 kN                |
| <b>Proof load, class 10.9</b>                           | 17 kN                |
| <b>Proof load, class 12.9</b>                           | 19 kN                |
| <b>Min. ultimate tensile, class 8.8</b>                 | 16 kN                |

Proof load = stress area  $\times$  proof stress per ISO 898-1. Design joints so the working preload stays below the proof load of the selected class.

## Common Applications for M6 Stud — GB/T 15389 / DIN 939 (Series 096)

M6 Stud — GB/T 15389 / DIN 939 (Series 096) are commonly specified for general-purpose machinery, jigs, fixturing and light structural connections.

## Mating Parts for M6

For M6, pair with a M6 hex nut (ISO 4032 / DIN 934) and, where used, a M6 flat washer (ISO 7089 / DIN 125A) under the head and under the nut.

## When to Step Up or Down from M6

When the joint preload approaches the proof load of M6 class 8.8, step up to M8 class 8.8 (or move to M6 class 10.9). When the joint is over-specified, M5 often saves weight and cost without losing the safety margin.

## Technical Drawing

Customize the parameters below — every spec field is editable, and the drawing redraws to match the values you choose.

Changing the size will snap the other fields to that size's standard values; you can then override any individual value.

Sends the selected values to the quote form below.

## Request a Quote

The form below follows the current technical drawing configuration. Change the drawing values above and the request details update automatically.

## Dimensions & Specifications (GB/T 15389 / DIN 939)

| Thread size | Pitch (mm) | Length L (mm) | Engagement depth bm (mm) | Material            | Reference standard |
|-------------|------------|---------------|--------------------------|---------------------|--------------------|
| M6          | 1.0        | 50            | 8                        | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M8          | 1.25       | 60            | 10                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M10         | 1.5        | 80            | 15                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M12         | 1.75       | 100           | 18                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M14         | 2.0        | 120           | 21                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M16         | 2.0        | 150           | 24                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M20         | 2.5        | 180           | 30                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M24         | 3.0        | 200           | 36                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M30         | 3.5        | 240           | 45                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |
| M36         | 4.0        | 280           | 54                       | Cl. 8.8 alloy steel | DIN 939 / GB/T 901 |

- S275JR
- S355J2

Inside the plant

## **Manufactured in our own plant**

This part is cold-formed, threaded, heat-treated and finished in-house. The stages below are where its class and finish are actually decided.

1.

01

### **Cold heading**

Wire rod is drawn to size and cold-formed into blanks. Forming rather than cutting keeps the grain flow continuous around the head, which is where a bolt is most likely to fail.

Head dimensions and under-head radius checked at set-up and per shift.

2.

02

## Thread rolling

Threads are rolled between hardened dies rather than cut. Rolled threads are stronger in fatigue than cut threads and hold pitch and flank angle far more consistently across a batch.

Go / no-go ring gauges to ISO 965 tolerance class 6g.

3.

03

### Heat treatment

Quench-and-temper brings carbon and alloy steel to the property class ordered — 8.8, 10.9 or 12.9 — with the furnace charge tracked so a finished lot can be traced back to it.

Core hardness and tensile tested per lot to ISO 898-1.

4.

04

## Surface treatment

Zinc, zinc-nickel, hot-dip galvanizing, black oxide, phosphate and Dacromet, selected against the service environment rather than against the price list.

Coating thickness and neutral salt spray hours to ISO 9227.

## Frequently Asked Questions

What clearance and tapping drill suit M6?

Use a 6.6 mm clearance hole (ISO 273 medium) for through-fixing, or a 5 mm tapping drill for a coarse M6 thread.

What is the coarse-thread pitch of M6 for Stud — GB/T 15389 / DIN 939 (Series 096)?

For M6 the standard coarse pitch is 1 mm — this is the value used for Stud — GB/T 15389 / DIN 939 (Series 096).

What torque do M6 class 8.8 Stud — GB/T 15389 / DIN 939 (Series 096) take?

A dry M6 class 8.8 joint takes about 10 Nm ( $\approx 14$  Nm for 10.9,  $\approx 17$  Nm for 12.9). Confirm against your joint design; lubrication reduces these values.

How do I request a quotation?

Use the technical drawing on this page to pick the exact configuration, then submit it with the quote form. We respond within one business day.
